

Cybersecurity Fundamentals Report

● What is Cybersecurity?

To keep your mobiles, laptops and internet secure from the unauthorized access/hackers. It's actually a security for keeping our personal data safe.

● CIA Triad

It stands for Confidentiality, Availability and Integrity. It is the foundation of cybersecurity

1. Confidentiality ensures that our data is private and only authorized person can see it.
2. Integrity ensures that our data is accurate and unchanged.
3. Availability ensures that our data should be accessible when needed.

● Common Cyber Threats

1. Phishing: Fake emails or websites that look real but can steal your private data.
2. Malware: Bad software like virus, spyware, trojan. It can damage the device and steal your data.
3. Data Breach: Steal or expose sensitive information of a company, organization and system.

● Blue Team vs. Red Team

1. Blue team: Protect the company and stop attacks by monitoring systems 24/7 and detecting, blocking and fixing security problems.
2. Red team: They act like hackers and try to break into the system so that they can find weaknesses before real hackers do.
